PROFESSIONAL EXPERIENCE

MICROSOFT | Senior Product Manager | Feb 2024–Present

Own strategy, investment priorities, multiyear roadmaps, launch governance, and cross-portfolio execution for enterprise customer-support platforms that identify customers, determine support plans and benefits, and route cases to the right experience or qualified personnel. Lead a \$200M+ annual portfolio and a projected \$1.2B partner opportunity, using governed customer context to power consistent rules-based and AI-assisted decisions.

- Unified customer context and decision platform**
Know Me | Scaled from platform vision to live adoption across 4+ customer and partner portals, with 9+ downstream services onboarding, reducing support-case misrouting by 6%. Built and scaled a unified identity, profile, entitlement, and support-context platform powered by reusable APIs and AI agents, enabling Microsoft contact-center portals, including Azure, Microsoft Admin Center, Power Platform Admin Center, Xbox, and other consumer support centers, as well as case-management systems and AI-assisted experiences to consistently identify customers, determine support access, and route cases appropriately.
- Cloud-partner support offering**
Unified for Partners (UfP) | Advanced from business case to launch with 3 new commercial partners and support for 4 live partners, achieving 67% initial billing activation and an estimated ~\$250K annualized billing run rate. Defined the onboarding, billing, support workflows, requirements, and delivery strategy for a projected \$1.2B five-year opportunity, while resolving early launch issues to strengthen operational stability.
- Customer qualification and support routing**
Commercial Eligibility & Tenant License Count | Expanded verified eligibility and license signals to 100% targeted-rule coverage, preventing approximately \$6K per day in routing overpayments. Designed, built, and delivered an AI agent that provides real-time signals across digital and phone support channels, enabling agentic routing to the appropriate support offer or qualified agent based on customer qualifications and service levels.
- Support-plan and benefit monetization**
Entitlements | Grew product investment across a \$200M+ annual portfolio and shaped a service-management offering estimated at \$46M for FY26–FY27. Directed the platform that determines customer support plans, purchased benefits, and service eligibility, translating entitlement capabilities into revenue-generating offerings and end-to-end customer experiences.
- Regulated-case access and assignment**
Restricted Access | Transformed a highly manual, six-month-plus process for setting up and offering support to government

customers into an automated, agentic AI workflow completed in just two weeks. Coordinated delivery across 10+ engineering, access-management, reporting, and support teams and designed auditable workflows that assign compliance-sensitive cases exclusively to eligible personnel, combining deterministic access controls, traceable decisions, reporting, and human accountability.

- **Operational reliability and customer recovery**

Disaster-recovery support continuity Azure | Defined a resilient fallback that preserves enhanced support for mission-critical customers when normal support services fail, targeting a 15-minute response commitment. Defined and designed the end-to-end recovery approach and aligned engineering, customer support, incident response, and data teams on customer identification, service levels, case routing, monitoring, operational ownership, launch validation, and rollback safeguards.

- **Principal-level leadership**

UfP, Know Me, Entitlements & Restricted Access | Turned cross-portfolio complexity into aligned strategy, governance, and investment decisions. Established executive decision forums, multiyear roadmaps, launch governance, dependency management, and risk plans; redirected investment by stopping low-value development when data quality and ROI did not justify continued spend.

COMPLIANCE.AI | Director of Product | USA | Feb 2023–Jan 2024

- Directed AI/ML product strategy for a regulatory-intelligence platform, translating complex regulatory content into actionable governance, risk, and compliance workflows.
- Defined AI-enabled product experiences, API integrations, roadmap priorities, and customer feedback loops, emphasizing accuracy, explainability, enterprise trust, and measurable evaluation criteria for production readiness.
- Led product managers and API engineers across packaging, integrations, and customer delivery; set priorities, coached execution, and aligned product and engineering decisions, contributing to a reported 30% increase in customer retention.

MICROSOFT | Senior Product Manager, News & Feeds | Canada | May 2022–Feb 2023

- Defined product vision, strategy, OKRs, and launch plans for AI/ML-powered misinformation experiences across Microsoft News and Feeds.
- Delivered product improvements associated with a 10% increase in daily active users and strengthened release quality through disciplined cross-functional execution.

MICROSOFT | Senior Product Manager, Azure Communication Services | Canada 2020–2022

- Led vision, roadmap, monetization, and launch execution for Job Router, a core Azure Communication Services capability for contact-center customers.
- Conducted 50+ customer surveys and 20 focus groups, translating 140+ requirements into roadmap priorities; contributed to a 20% increase in Azure service daily active users within three months.
- Established cross-team release governance and quality checkpoints and led shiproom execution across engineering, design, field, and customer stakeholders.

LIGHTBEND | Technical Product Management Lead | 2020

- Led the launch of a cloud-native SaaS solution for open-source developers and enterprise customers; shaped business strategy, capacity planning, and pricing.

BOEING | Senior Technical Product Manager | 2018–2020

- Led a cloud-based flight-data analytics portfolio using data and AI/ML capabilities; onboarded 100+ aviation customers and enabled a reported 20% reduction in flight-operations costs.

CA TECHNOLOGIES | Technical Product Manager | 2015–2018

- Launched a scalable API-management solution and developed pricing and packaging strategies, contributing to a reported 40% increase in customer retention.

PAYBYPHONE | Product Manager | 2014–2015

- Led mobile-parking product strategy and launches for major cities, including San Francisco, Paris, and Vancouver.

BORDEN LADNER GERVAIS LLP | Technical Product Manager / Software Developer | 2003–2013

- Advanced from software development to product leadership; led enterprise document-management products and a national OpenText eDocs deployment.
